Work on the sequence is in program and the release of this data is based on the understanding that sequence may change as work continues. The sequence may be contaminated with foreign sequence from E.coli, yeast, vector, phage etc. Order of segments is not known; 800 n's separate segments. Unfinished: dJ785G19 Contig_ID: 00043 acc=AL035458 Length: 132647 bp.
* NOTE: This is a 'working draft' sequence.
* This record will be updated with the finished sequence as soon as it is available and the accession number will

                                                                                                                                                                                                                                                                                                                                       consistences, which are receptors for interleukin-13 (IL-13) alpha receptor. The civention relates to new purified peptides comprising 380 or 427 amino control sequences, which are receptors for interleukin-13 (IL-13); the 380 conditions are designated IL-13R beta and alpha respectively. The IL-13R beta has high affinity for IL-13R beta and alpha respectively. Out acquires high affinity when associated with the IL-4 conditions are designated IL-13R beta and alpha are used as conditions of heterozygosity and rearrangements, or chromosomal considered which can be used for production of recombinant IL-13R beta and alpha are used as conditions. They are also used for production of recombinant IL-13R beta and alpha which can be used for production of recombinant IL-13R beta and alpha which can be used for production of recombinant of allergy. Il-13. receptors are also used as IL-3 antagonists, specifically to consider therapy (blocking synthesis of IL-13R). Antibodies are used (in standard immunoassays) to diagnose diseases associated with abnormal expression of IL-13 receptors, when coupled to a toxin also for treatment of overproduction of IL-13R. Cells that express IL-13R at the surface are used to identify ligands and modulators of IL-13R.

Number of hits that pass the threshold

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
